## Assignment-1: A\* Search

**(Read all the instructions carefully & adhere to them.)**

**Date: 02-08-2019**

In a general search algorithm each state ( $n$ ) maintains a function

$$f(n) = g(n) + h(n)$$

where  $g(n)$  is the least cost from source state to state  $n$  found so far and  $h(n)$  is the estimated cost of the optimal path from state  $n$  to the goal state.

Implement a search algorithm for solving the **8-puzzle** problem with the following assumptions.

1.  $g(n)$  = least cost from source state to current state so far.
2. Heuristics
  - (a)  $h_1(n) = 0$ .
  - (b)  $h_2(n)$  = number of tiles displaced from their destined position.
  - (c)  $h_3(n)$  = sum of Manhattan distance of each tile from the goal position.
  - (d)  $h_4(n)$  = Devise a heuristic such that  $h(n) > h^*(n)$ .

### Instructions:

1. You should make use of two lists for the implementation. One (closed list) for maintaining the already explored states and other (open list) for maintaining the states which are found but yet to be explored.

2. Input is given in a file in the following format. Read the input and store the information in a matrix. Configuration of start state and goal state can be anything. For the example given below, T1, T2, ..., T8 are the tiles number and B is blank space.

**Start state**

T6	T7	T3
T8	T4	T2
T1	B	T5

**Goal state**

T1	T2	T3
T4	T5	T6
T7	T8	B

3. Output should have following information:

**On success**

- Success message
- Start state / Goal state
- Total number of states explored.
- Total number of states on optimal path.
- Optimal Path
- Optimal Cost of the path.

**On failure**

- Failure message
- Start state / Goal state
- Total number of states explored before termination.

4. Please make a table that should list the following for all the heuristics
- a) Total number of states explored.
  - b) Total number of states on optimal path.
  - c) Optimal path
  - d) Optimal Cost of the path.
  - e) Total time taken for execution
5. Please try to make your code as generic as possible (Preferably in C/C++/Java/Python).

6. Please collaborate with your group members.
7. Make your submission at <https://bit.ly/2LWXcEa>. The submission file should be as follows: **Group-NUMBER\_Assignment-NUMBER.zip**
